

Levetiracetam

I would be grateful if you would prescribe Levetiracetam at a dose of 250mg per day increasing in weekly stages of 250mg until he/she is on a dose of 750mg bd. Levetiracetam is well tolerated but may cause dizziness, drowsiness and tremor, as may psychiatric symptoms at higher dose (usually over 2.5gm).

Levetiracetam withdrawal:

Withdrawal by 250mg a week until the patient is off it.
